

Vannstrøm, krefter og deformasjon

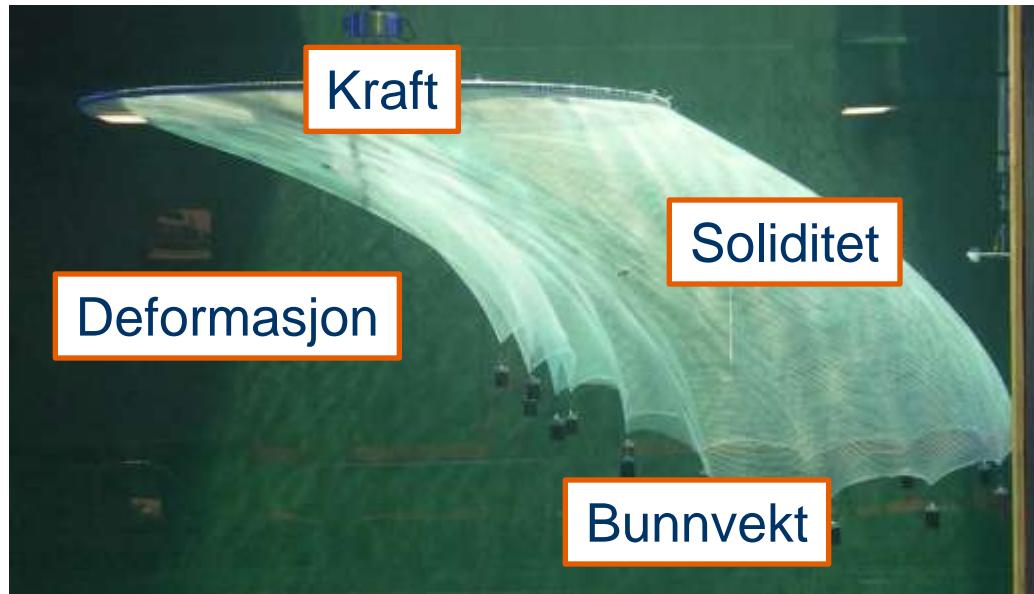

Pål Lader

SINTEF Fiskeri og havbruk

CREATE - Centre for research based innovation in aquaculture technology

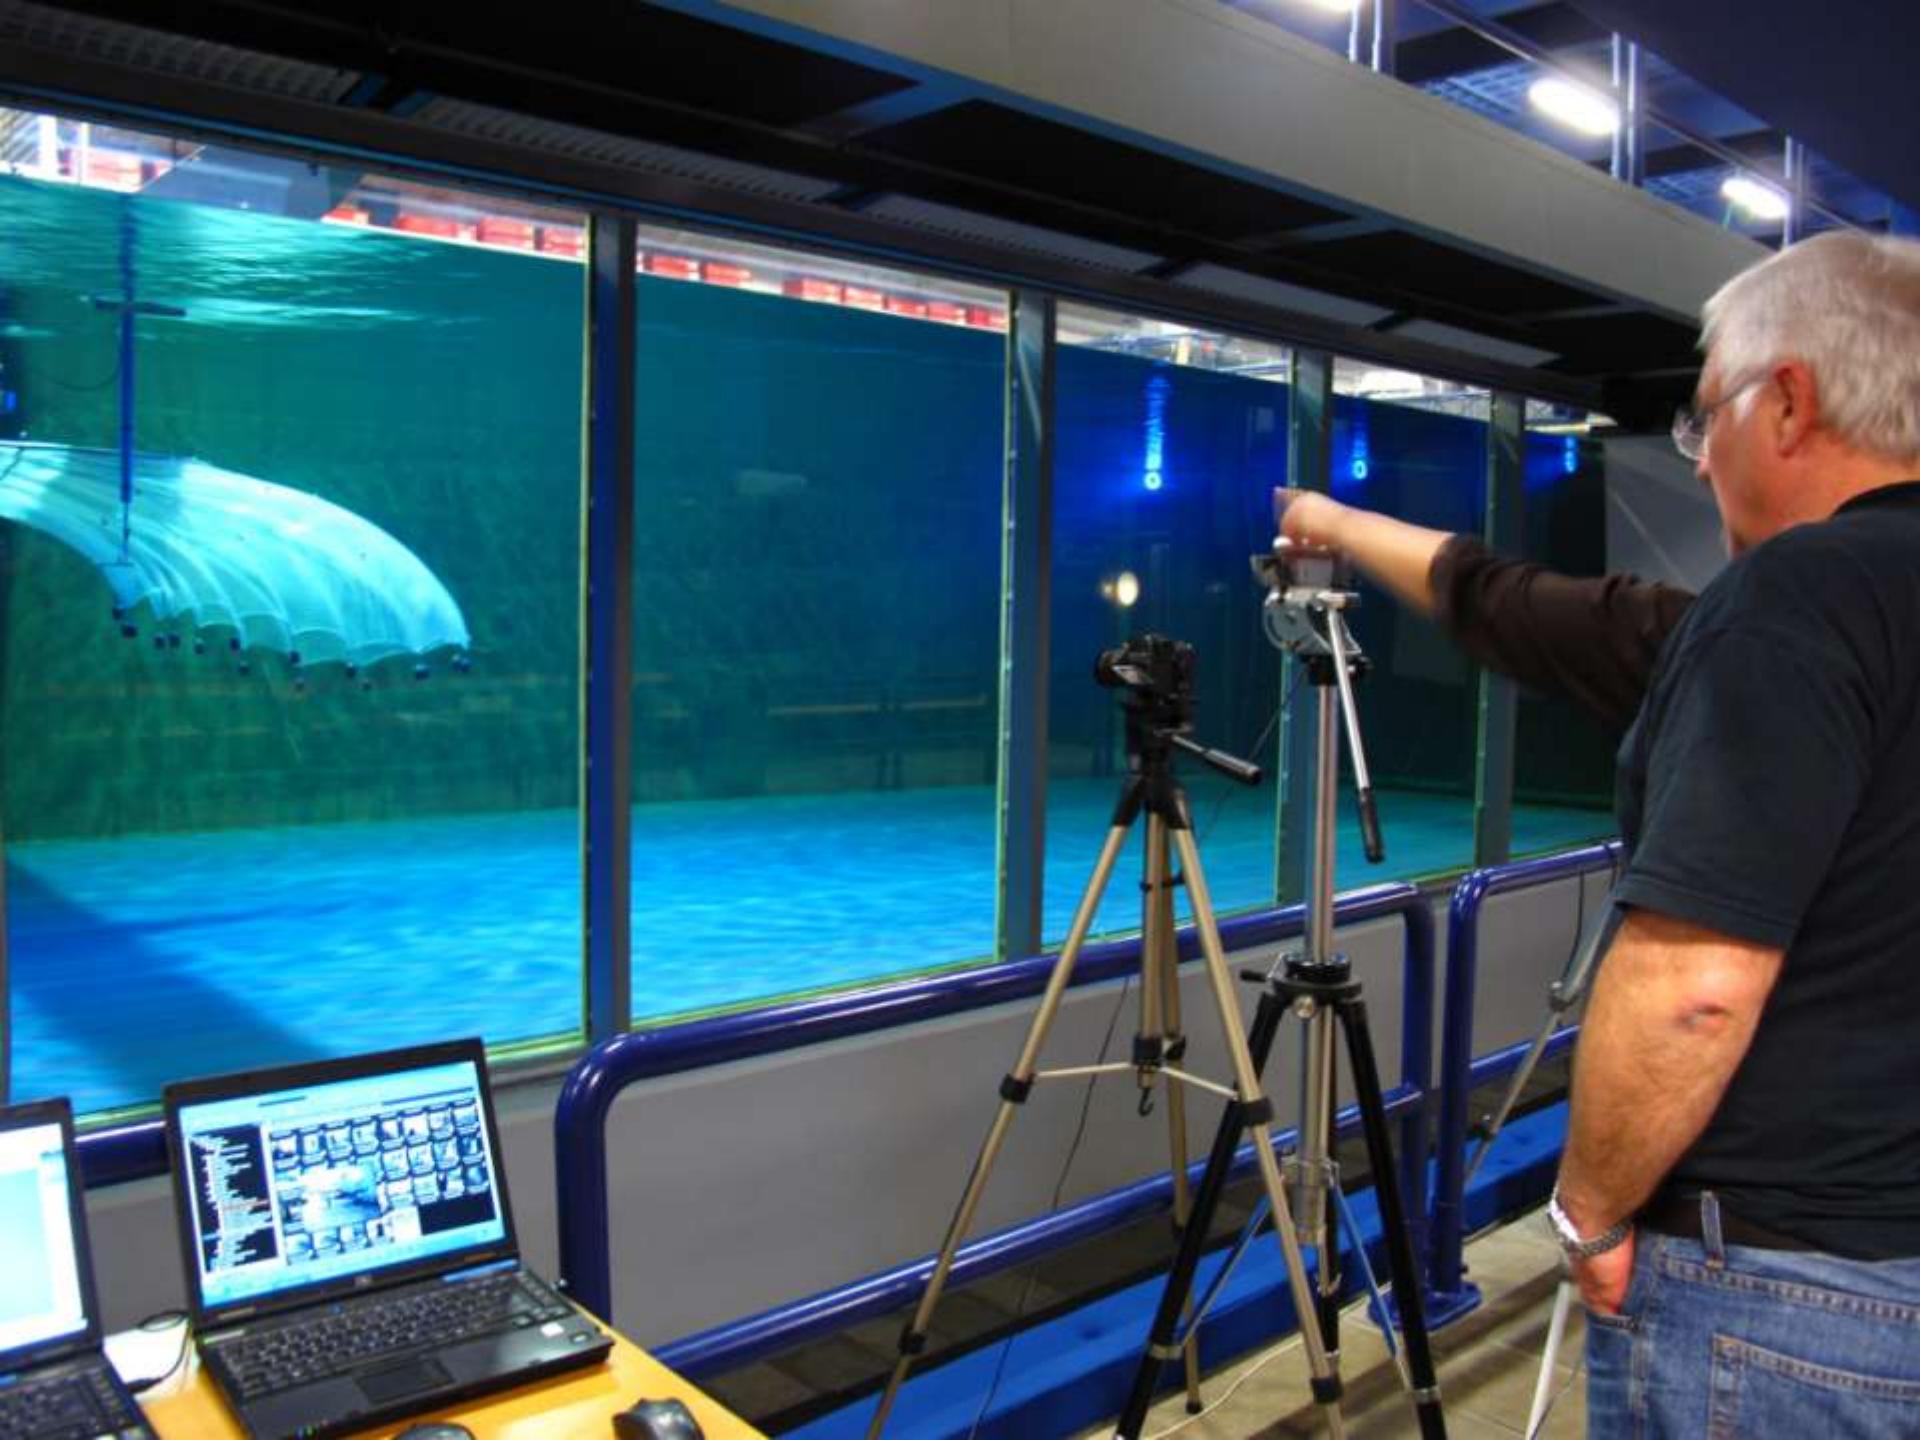

Hva jeg skal snakke om

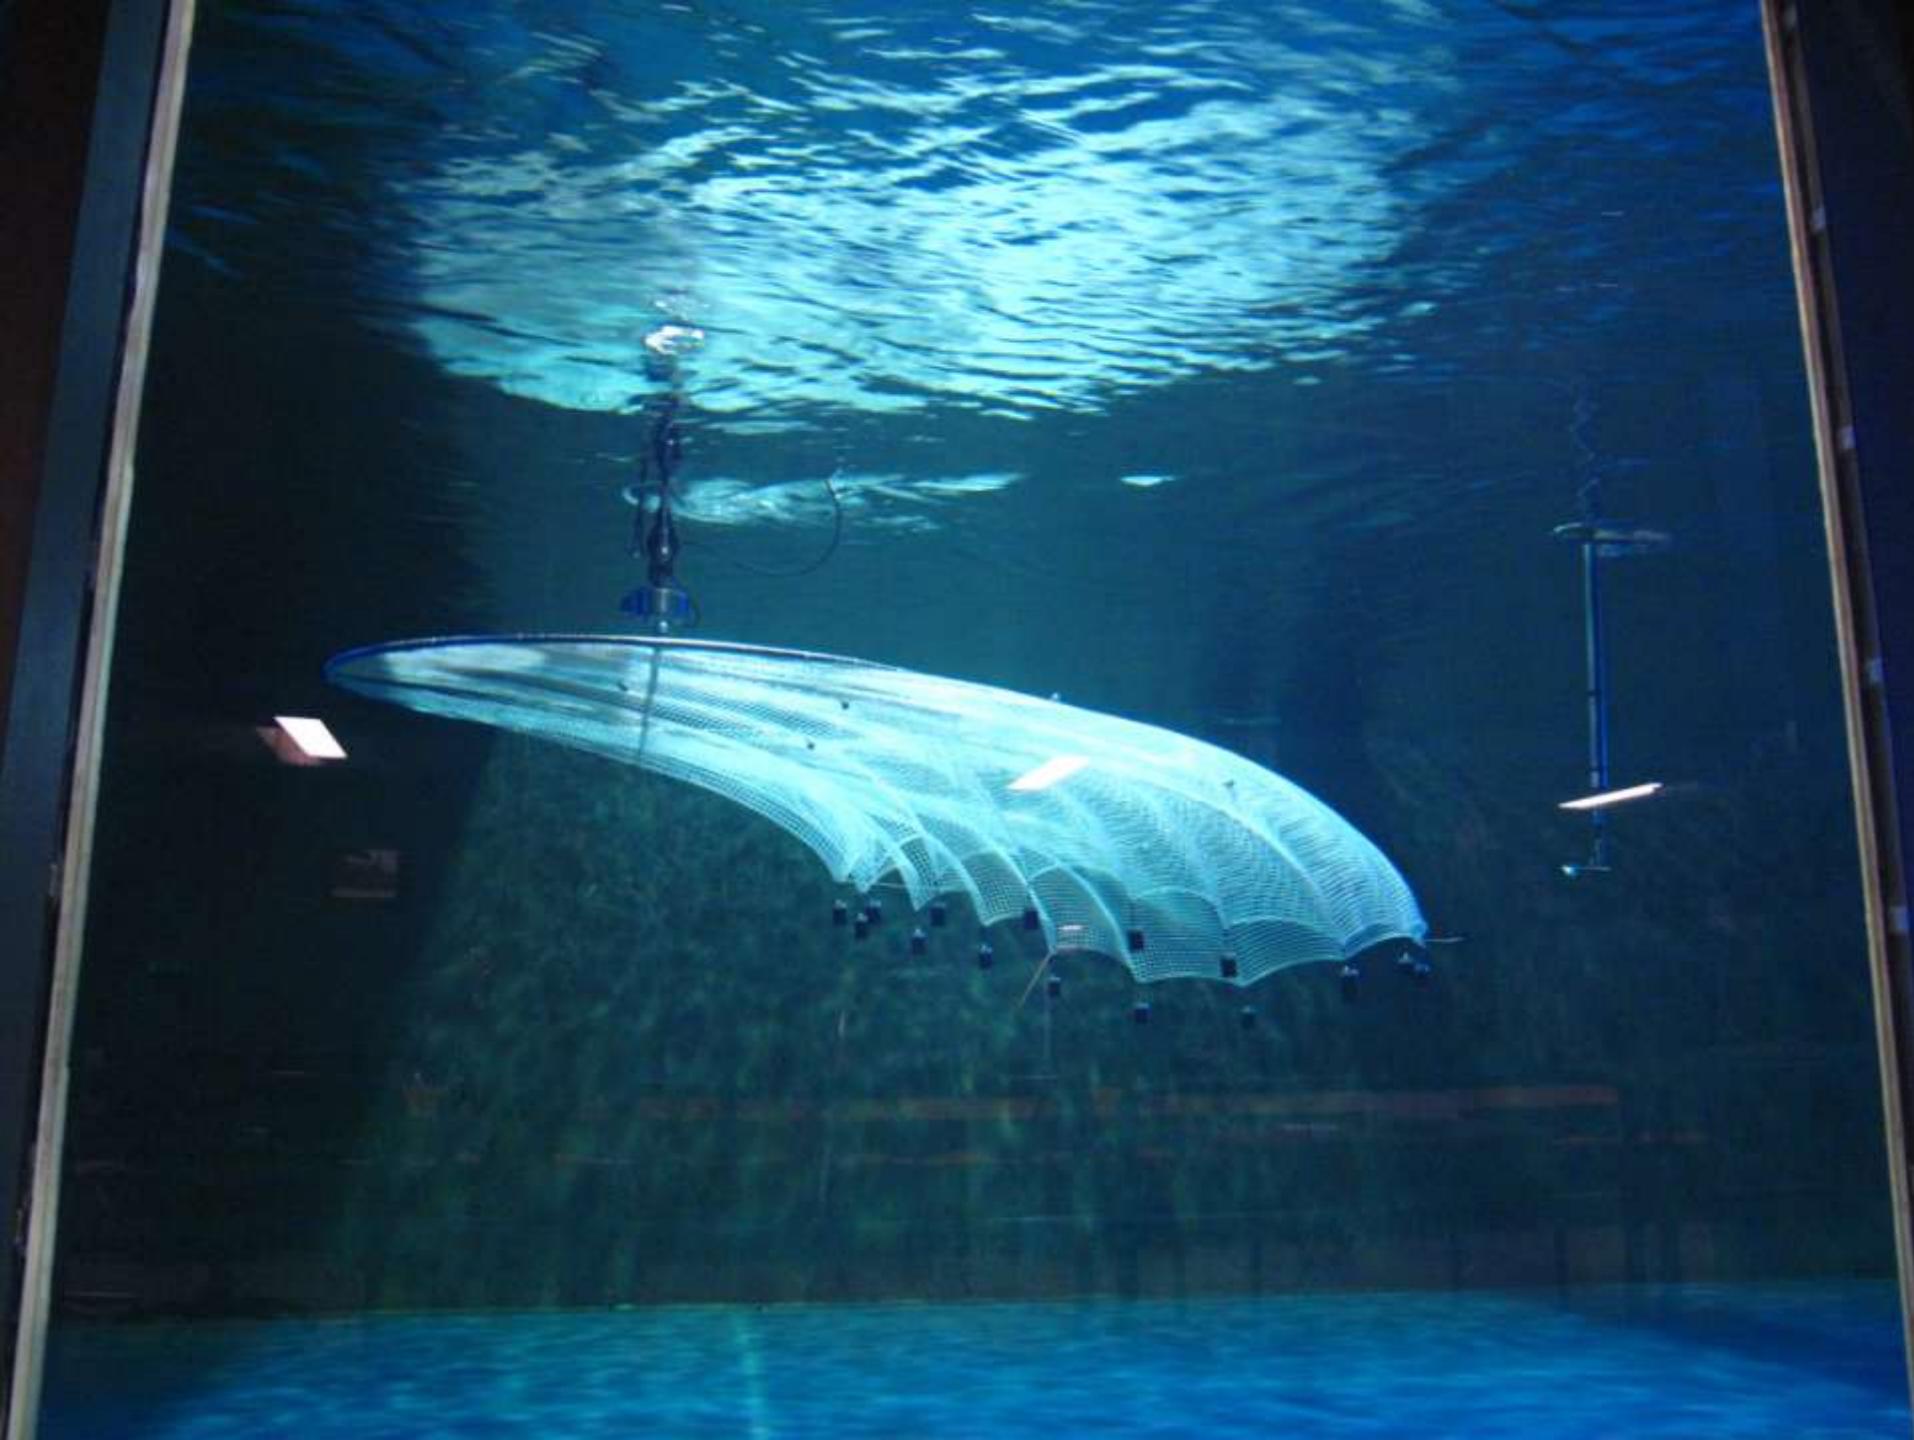

- Hva skjer med en fleksibel merd når den utsettes for strøm?

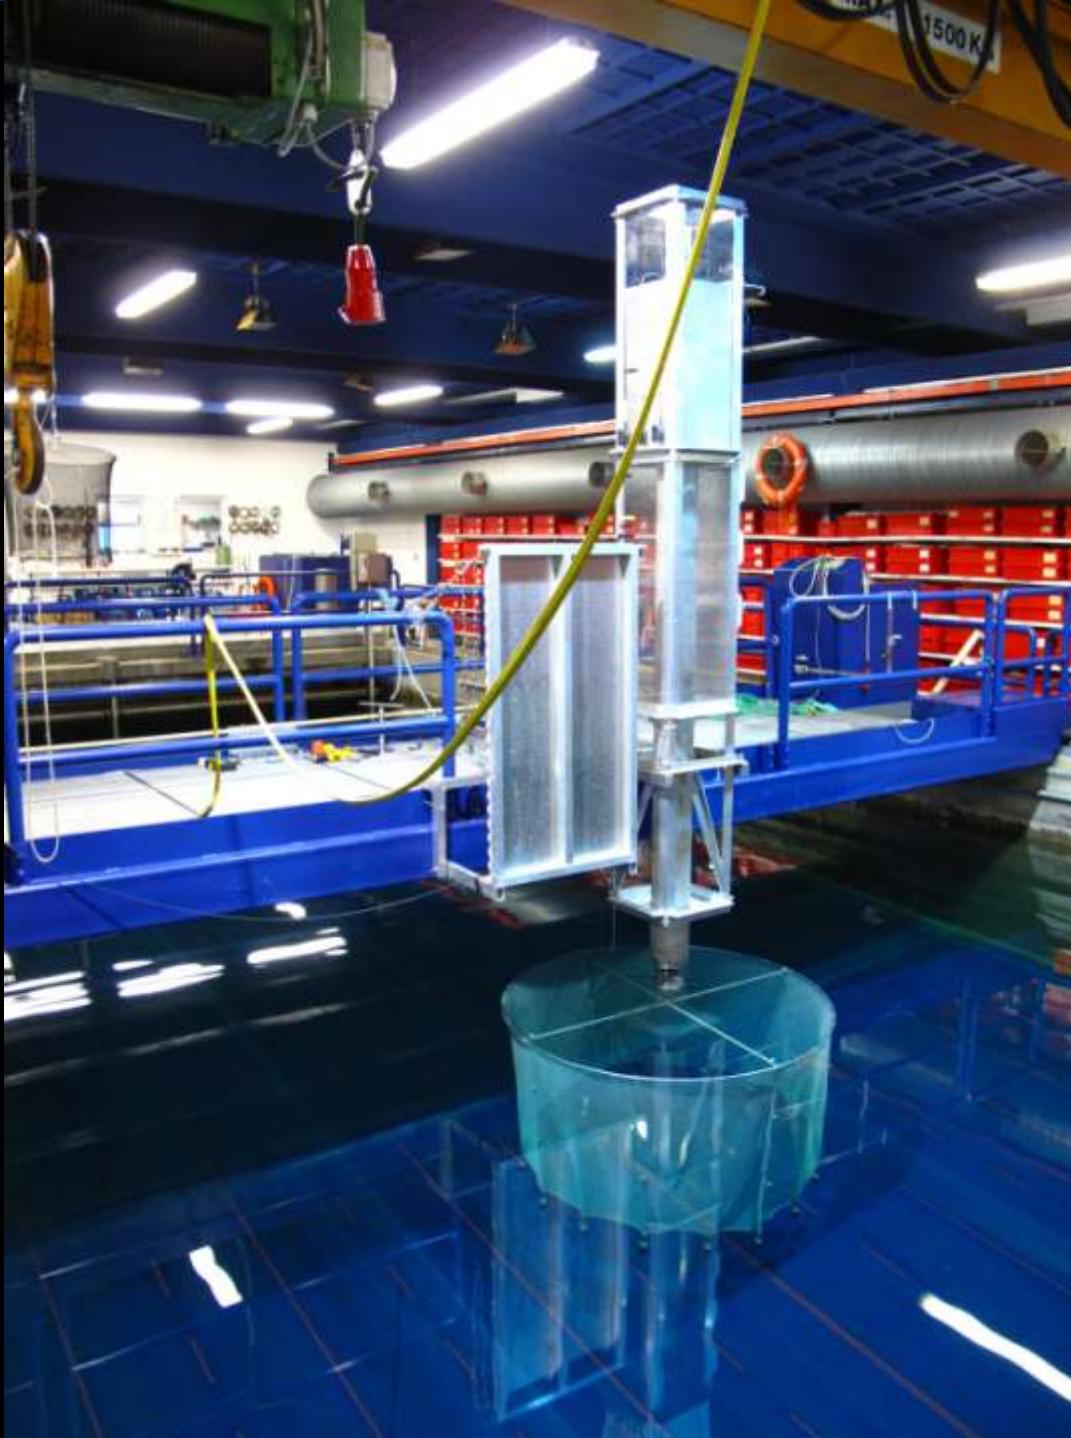

- Erfaringer fra fullskala målinger og laboratorieforsøk

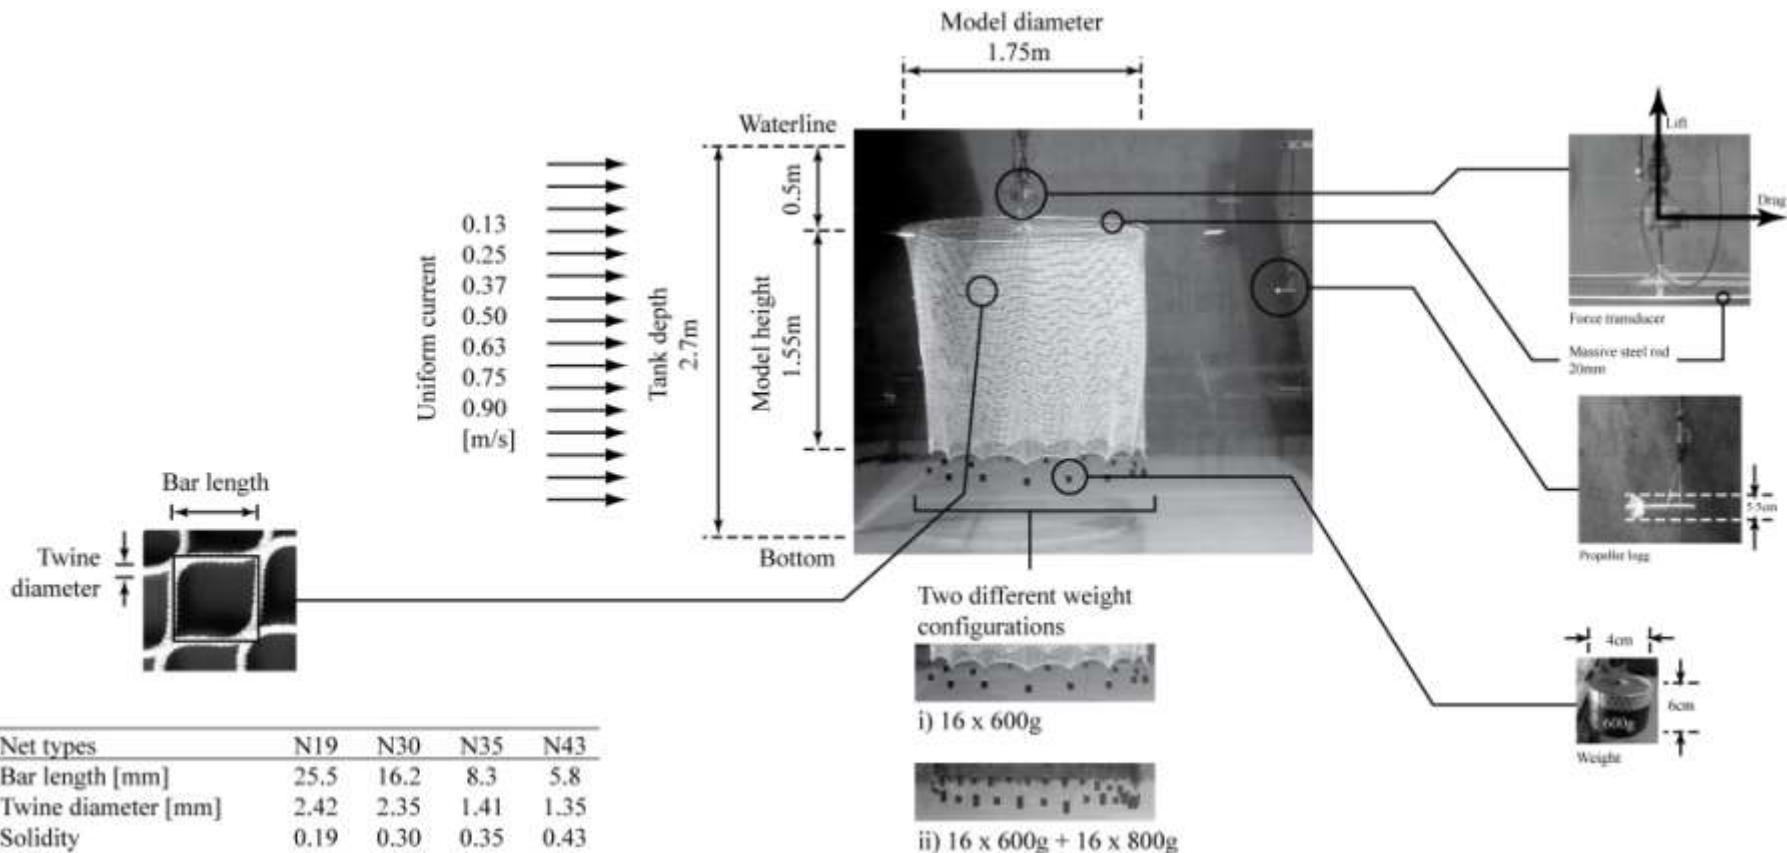

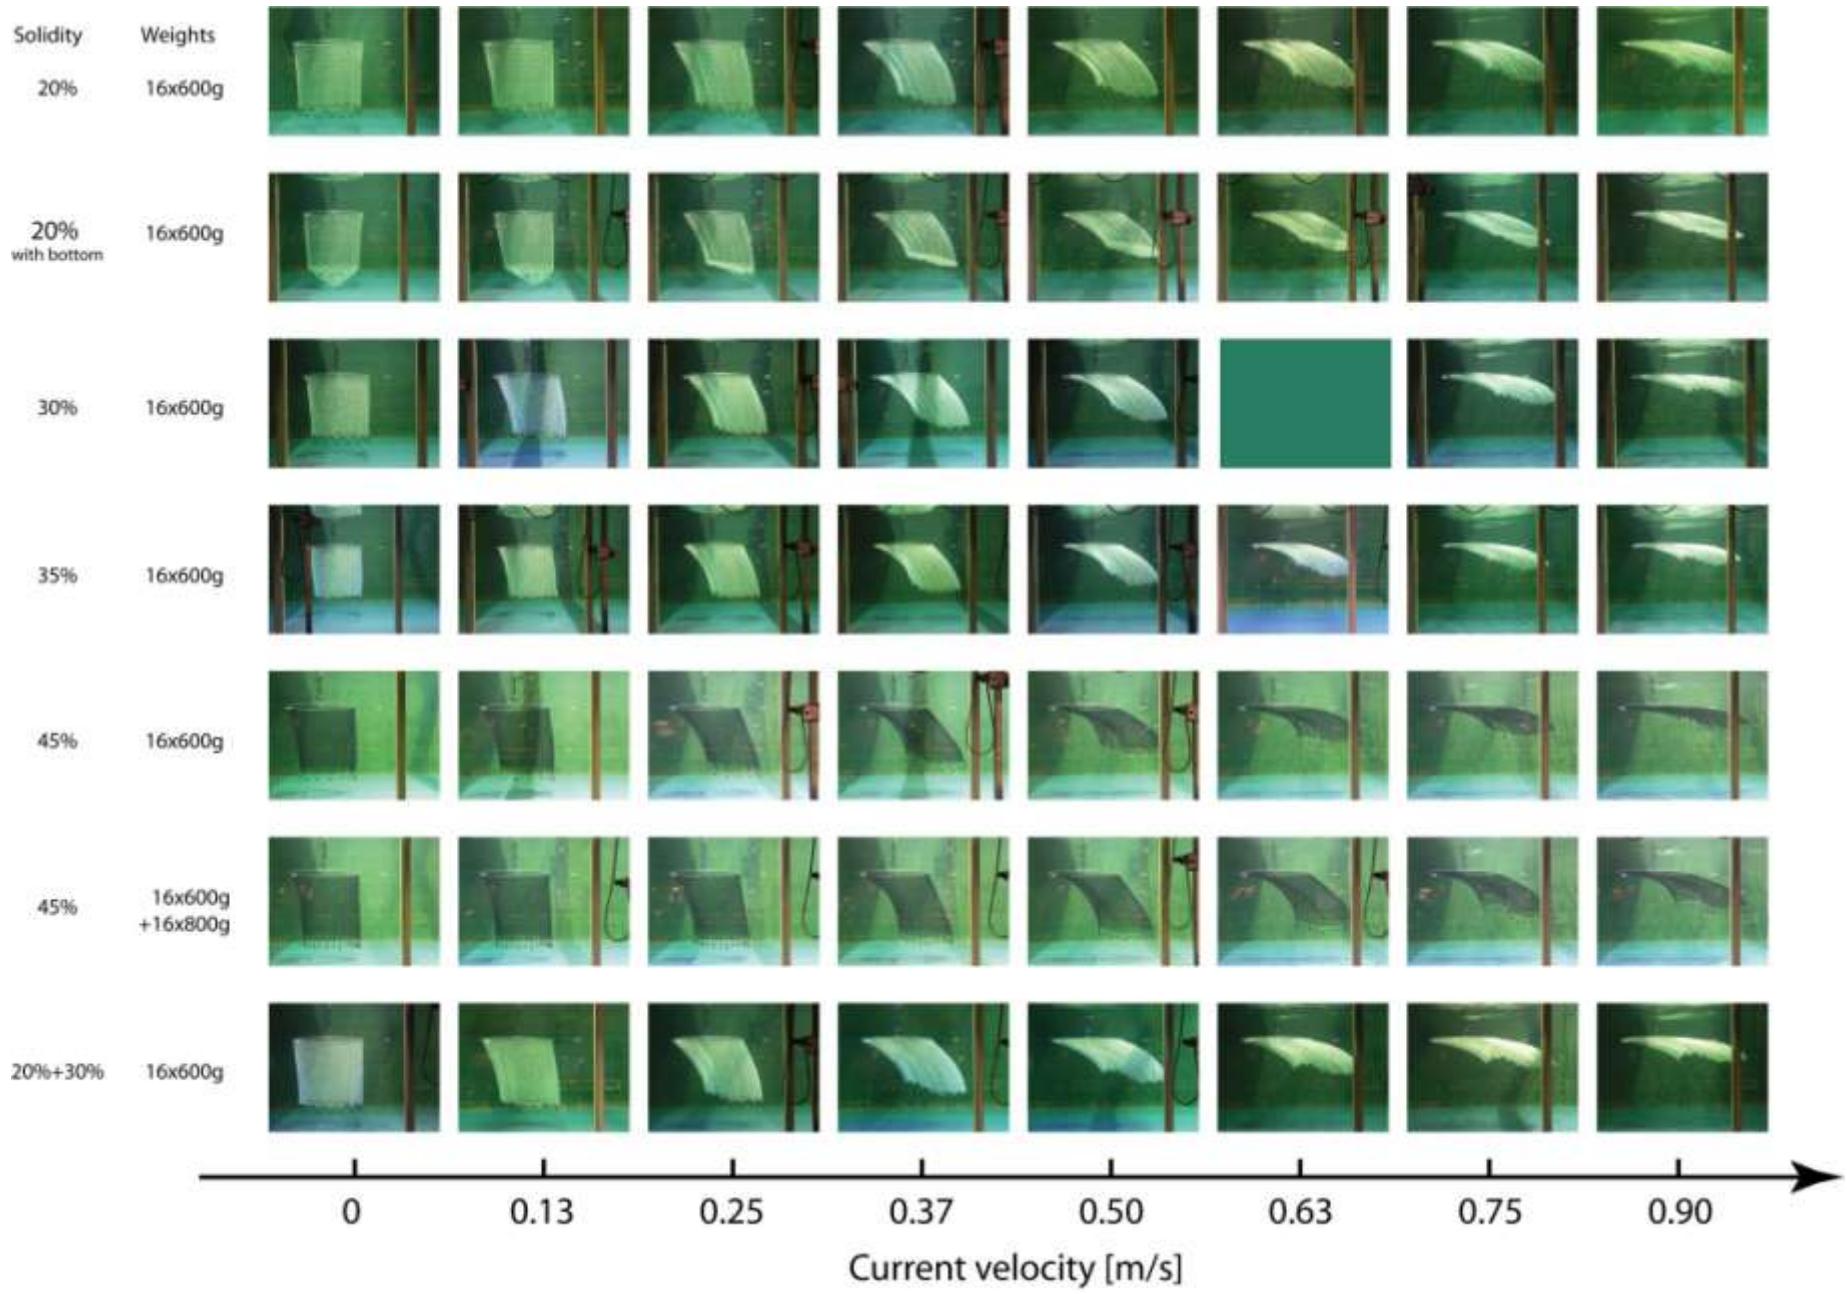

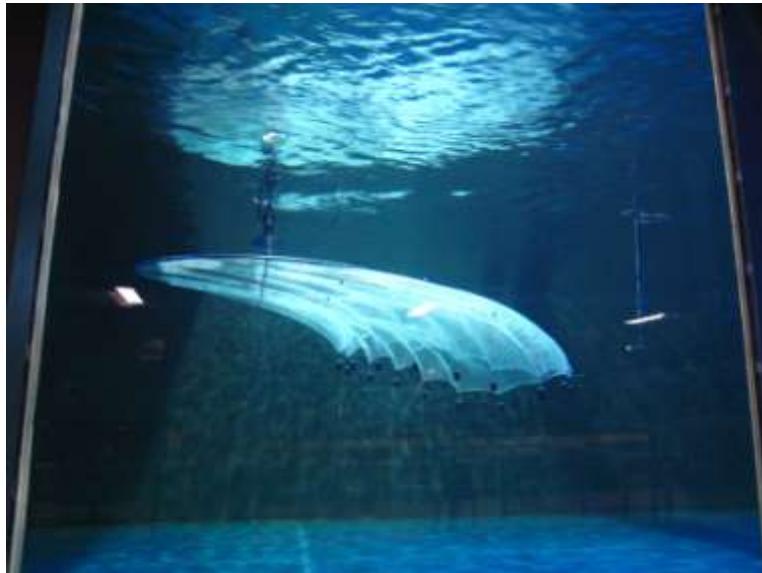

Forsøksoppsett

Havbrukskonstruksjoner

- Enkle eller komplekse?

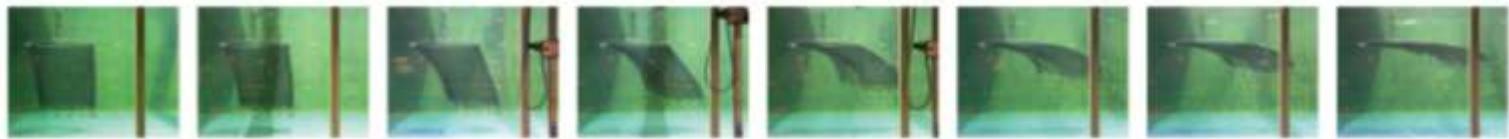

Enkel?

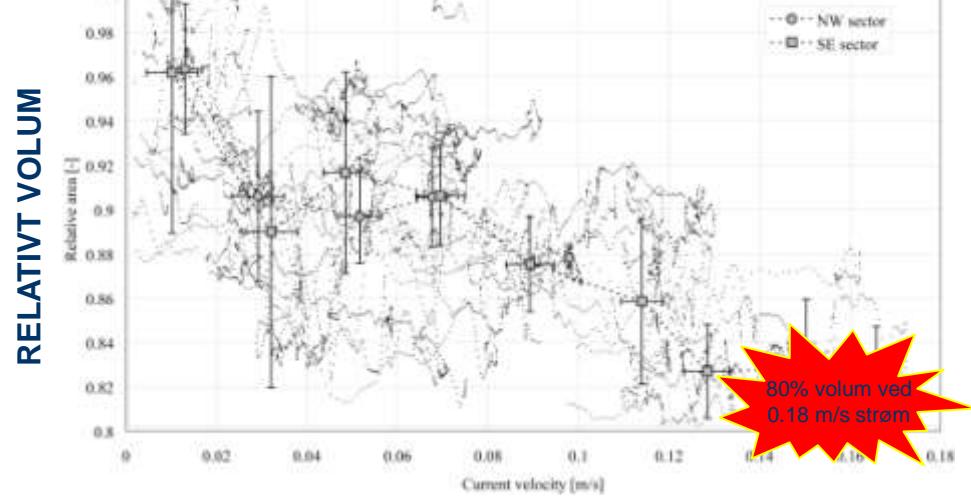

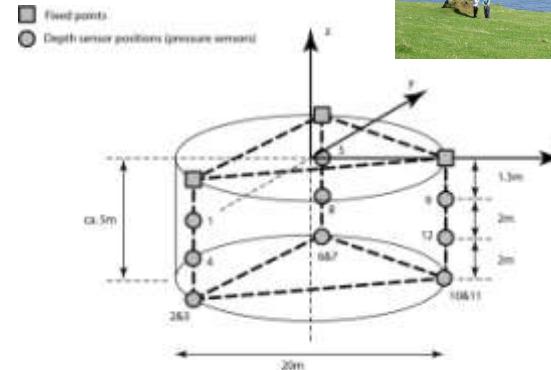

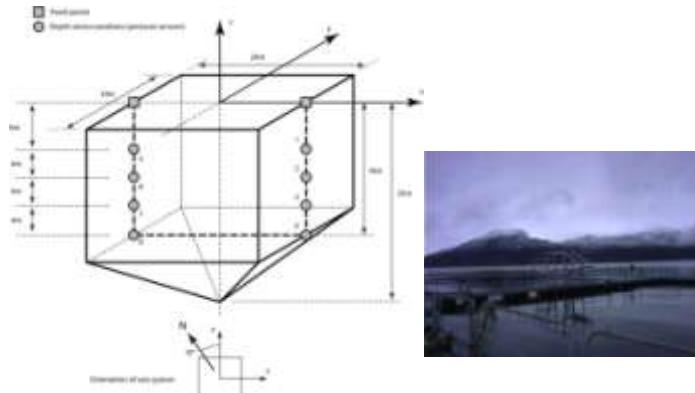

Kompleks?

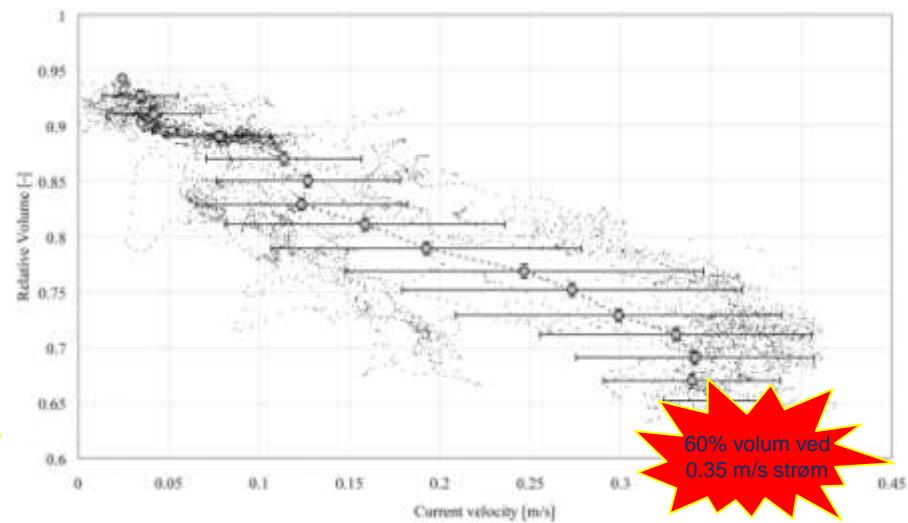

DEFORMASJON - En velsignelse og en forbannelse

Forbandelse (Volum)

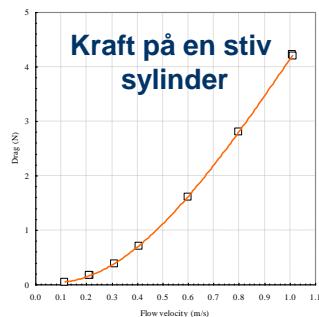

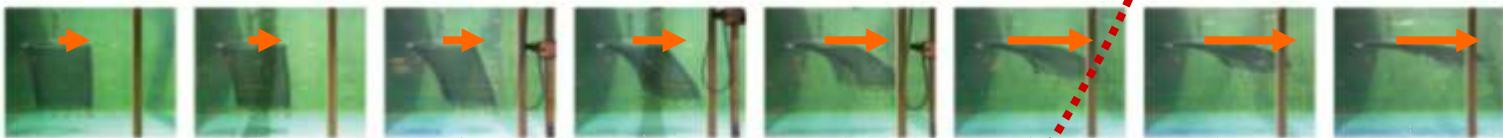

STRØMHASTIGHET

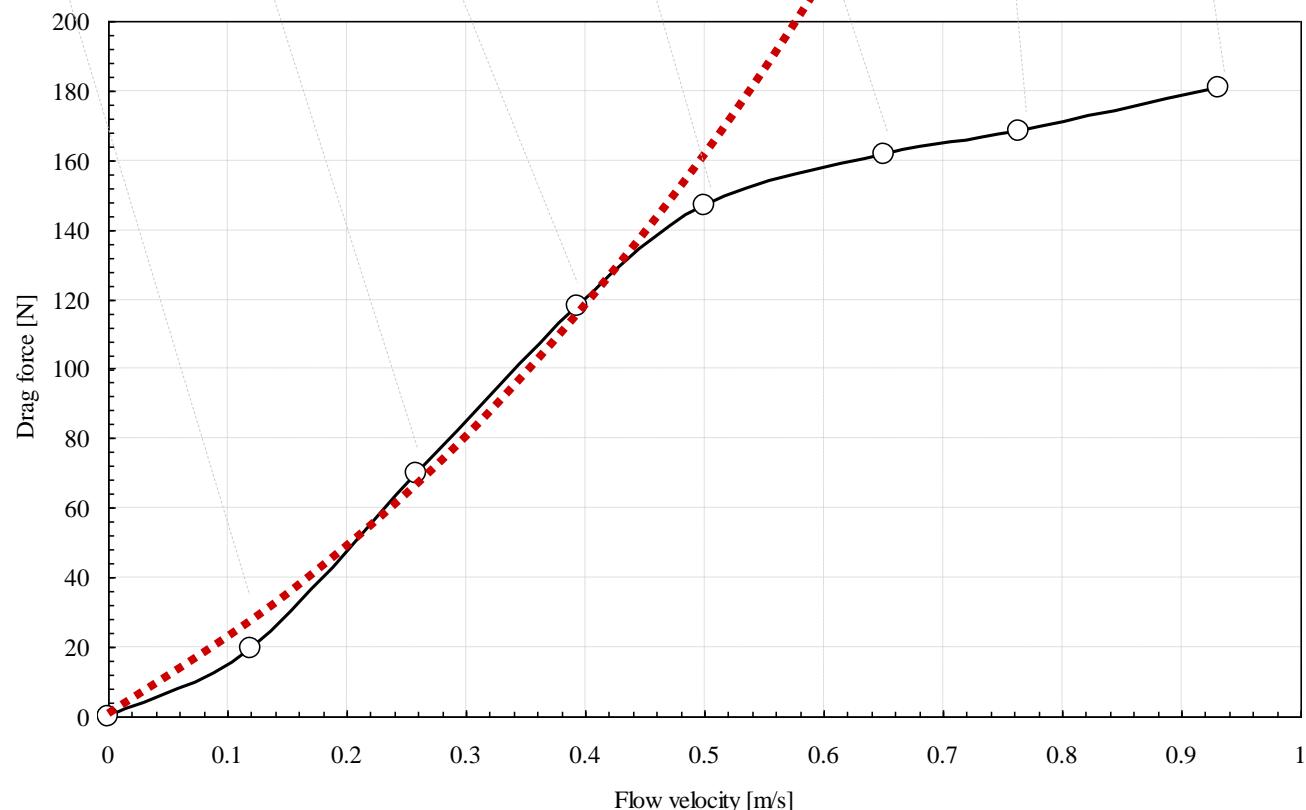

60% volum ved
0.35 m/s strøm

Velsignelse (Kraft)

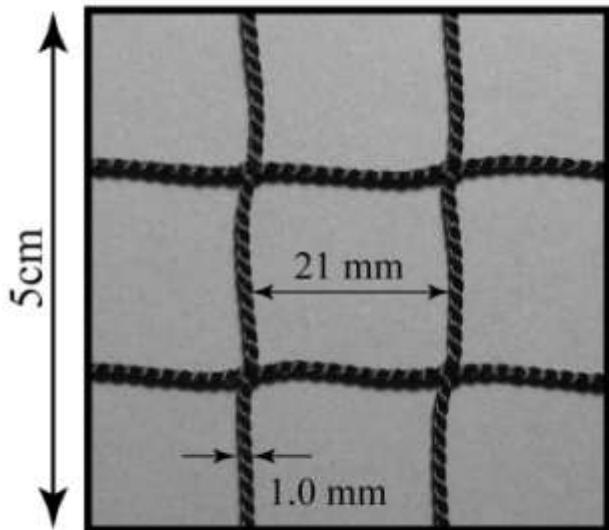

KRAFT

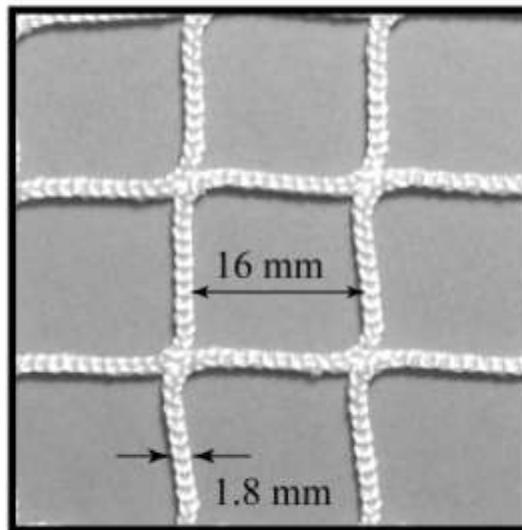

Hva skjer når vi øker soliditeten?

Net Case 3

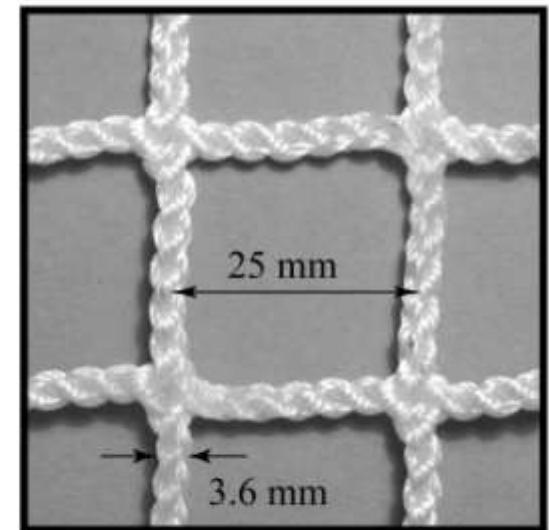

Solidity = 0.095

Net Case 1

Solidity = 0.220

Net Case 2

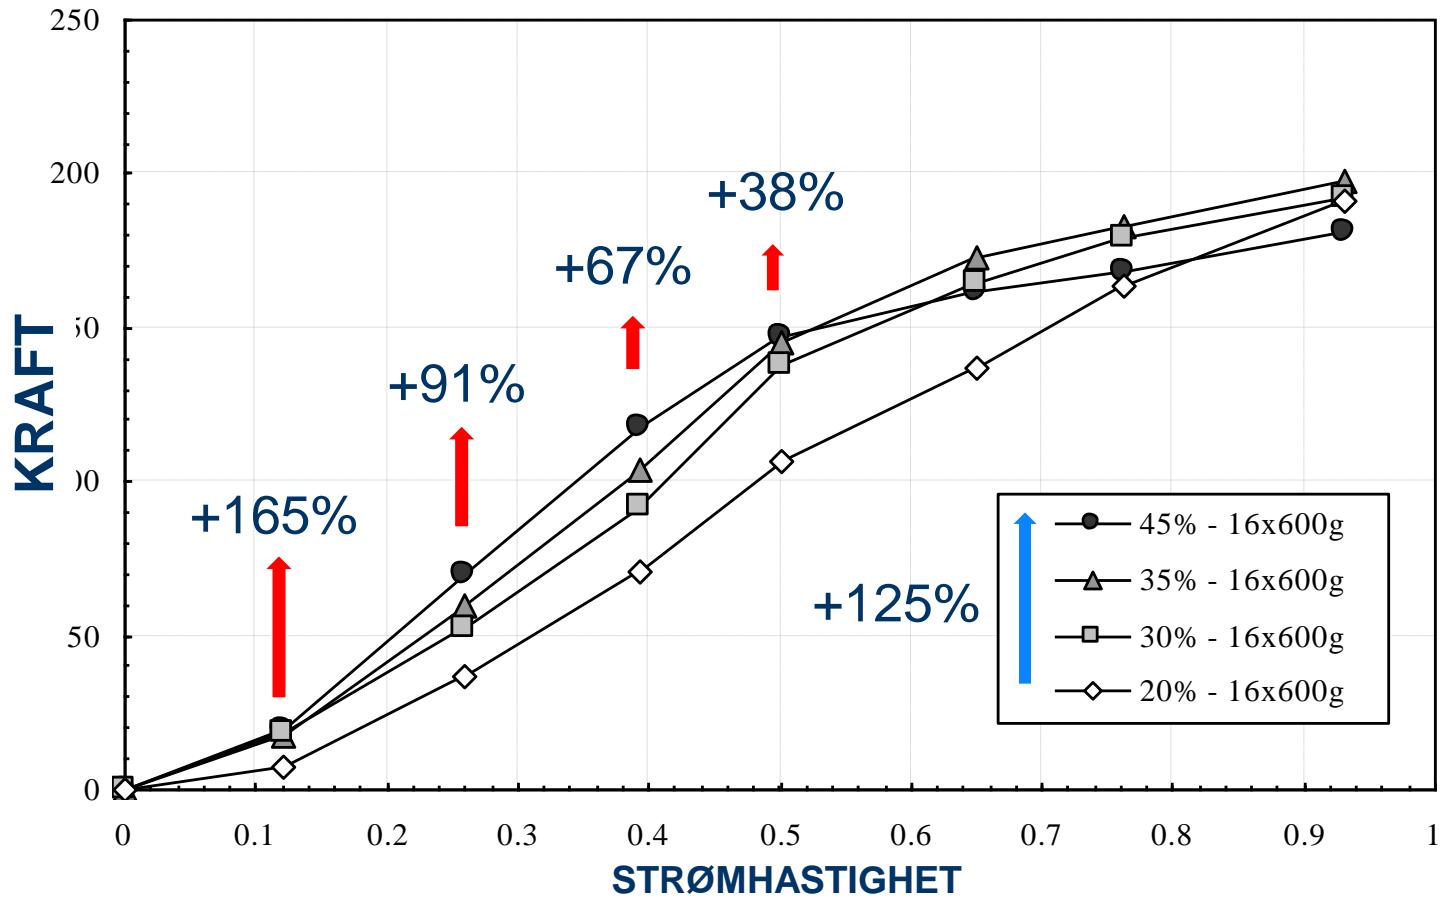

Solidity = 0.288

Hva skjer når vi øker soliditeten?

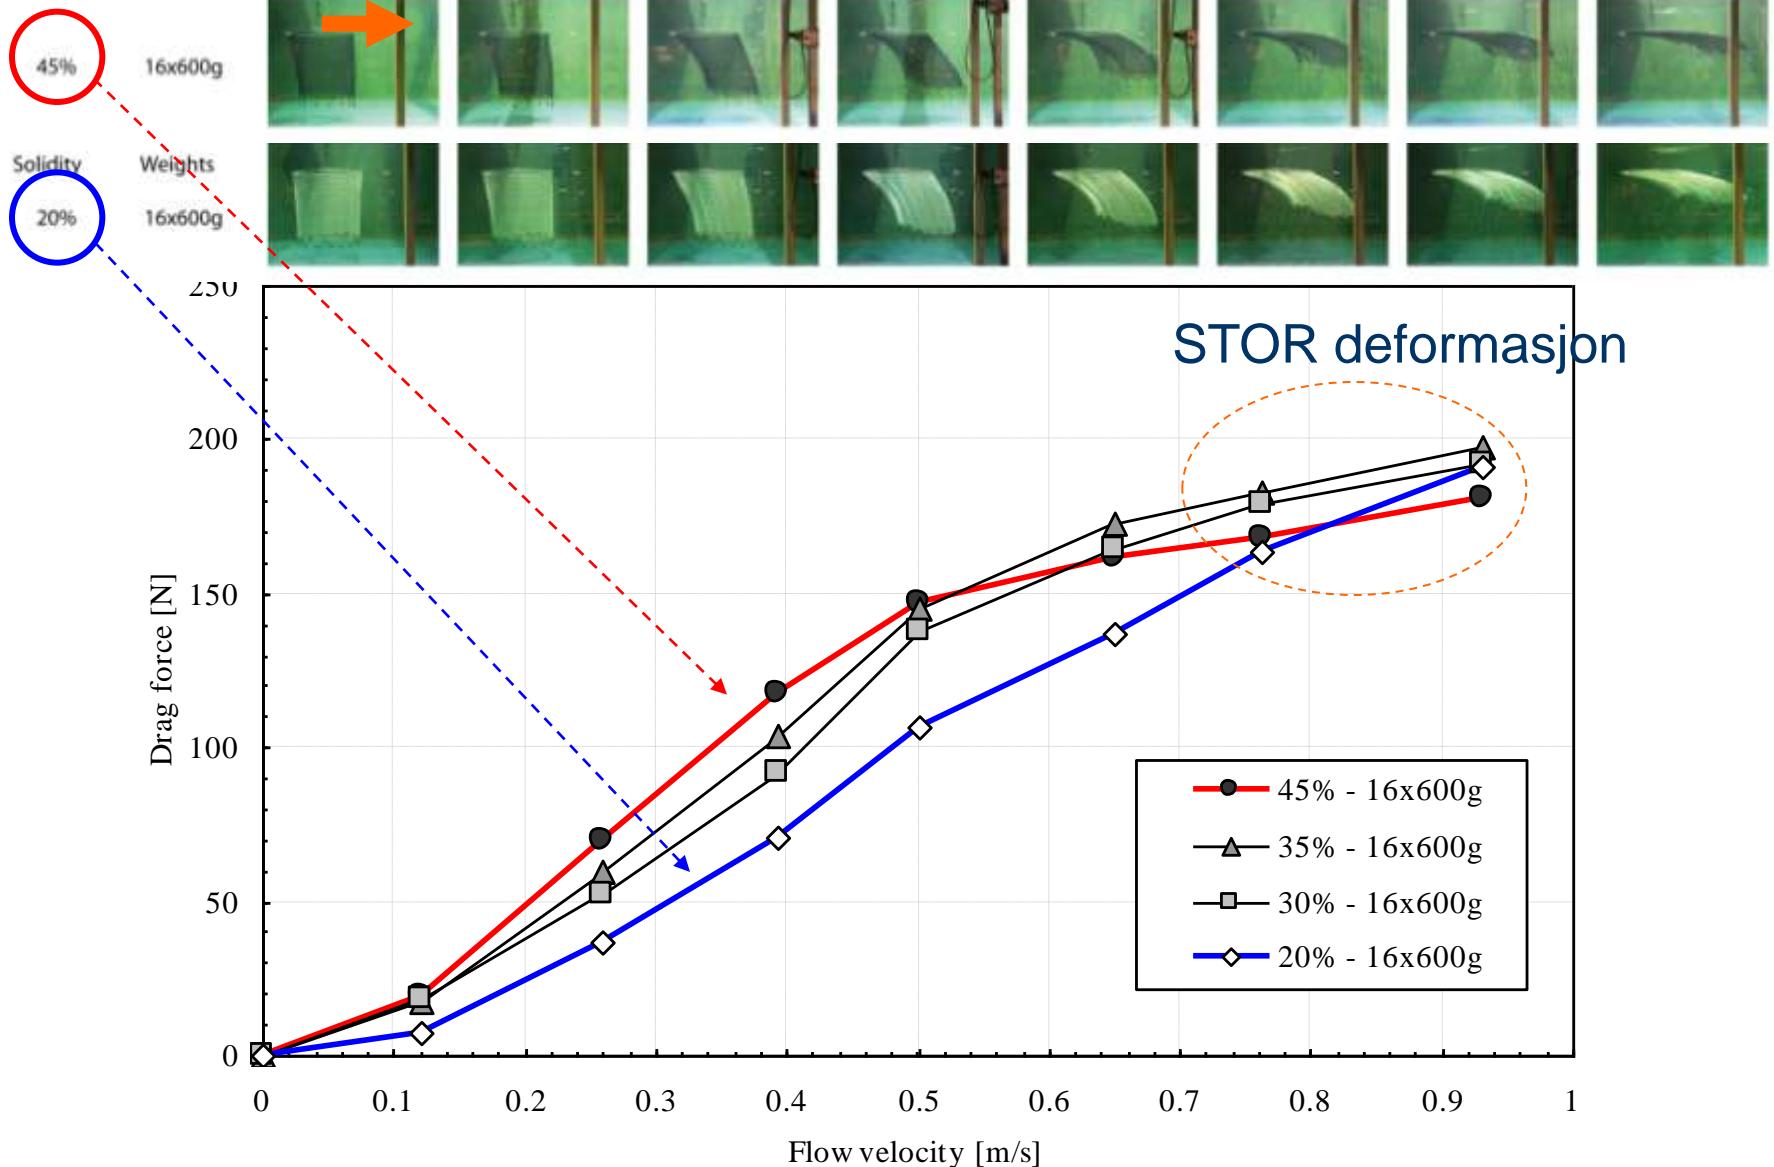

Arealet øker...

...og dermed øker kraften

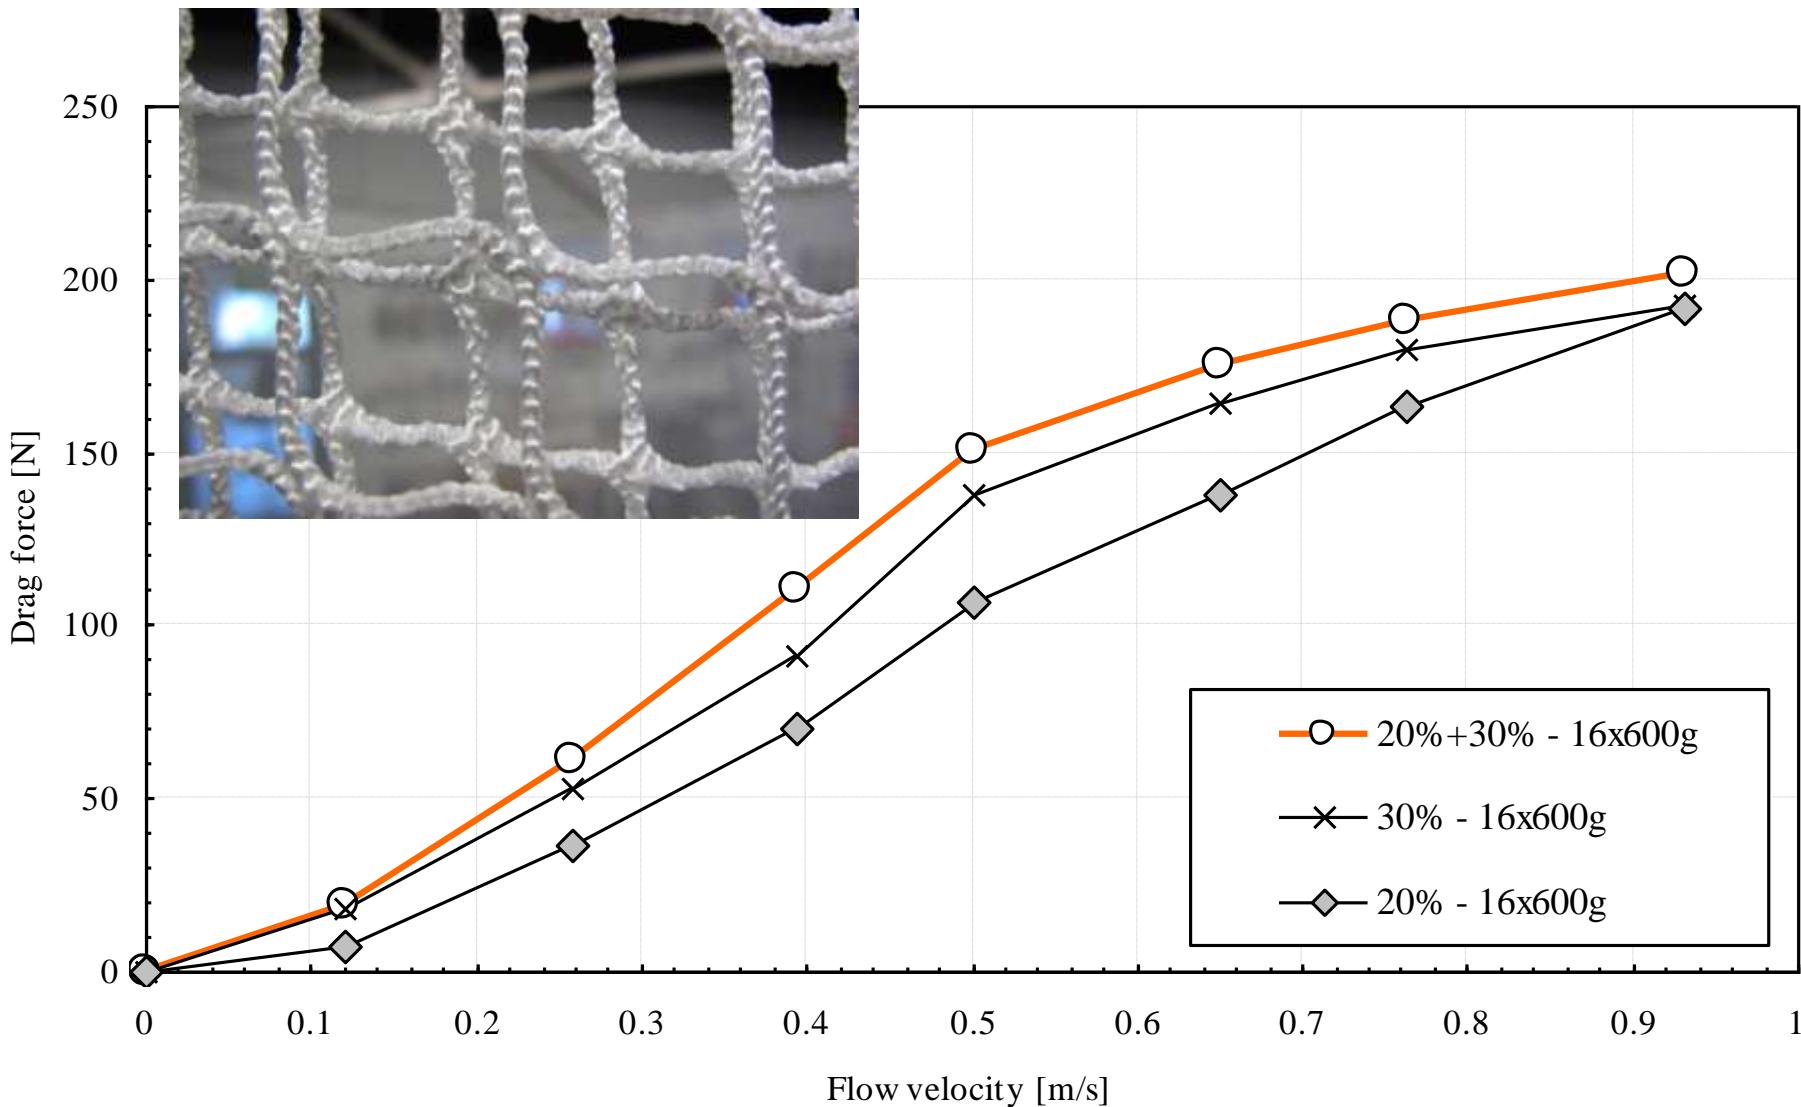

Soliditetens innvirkning

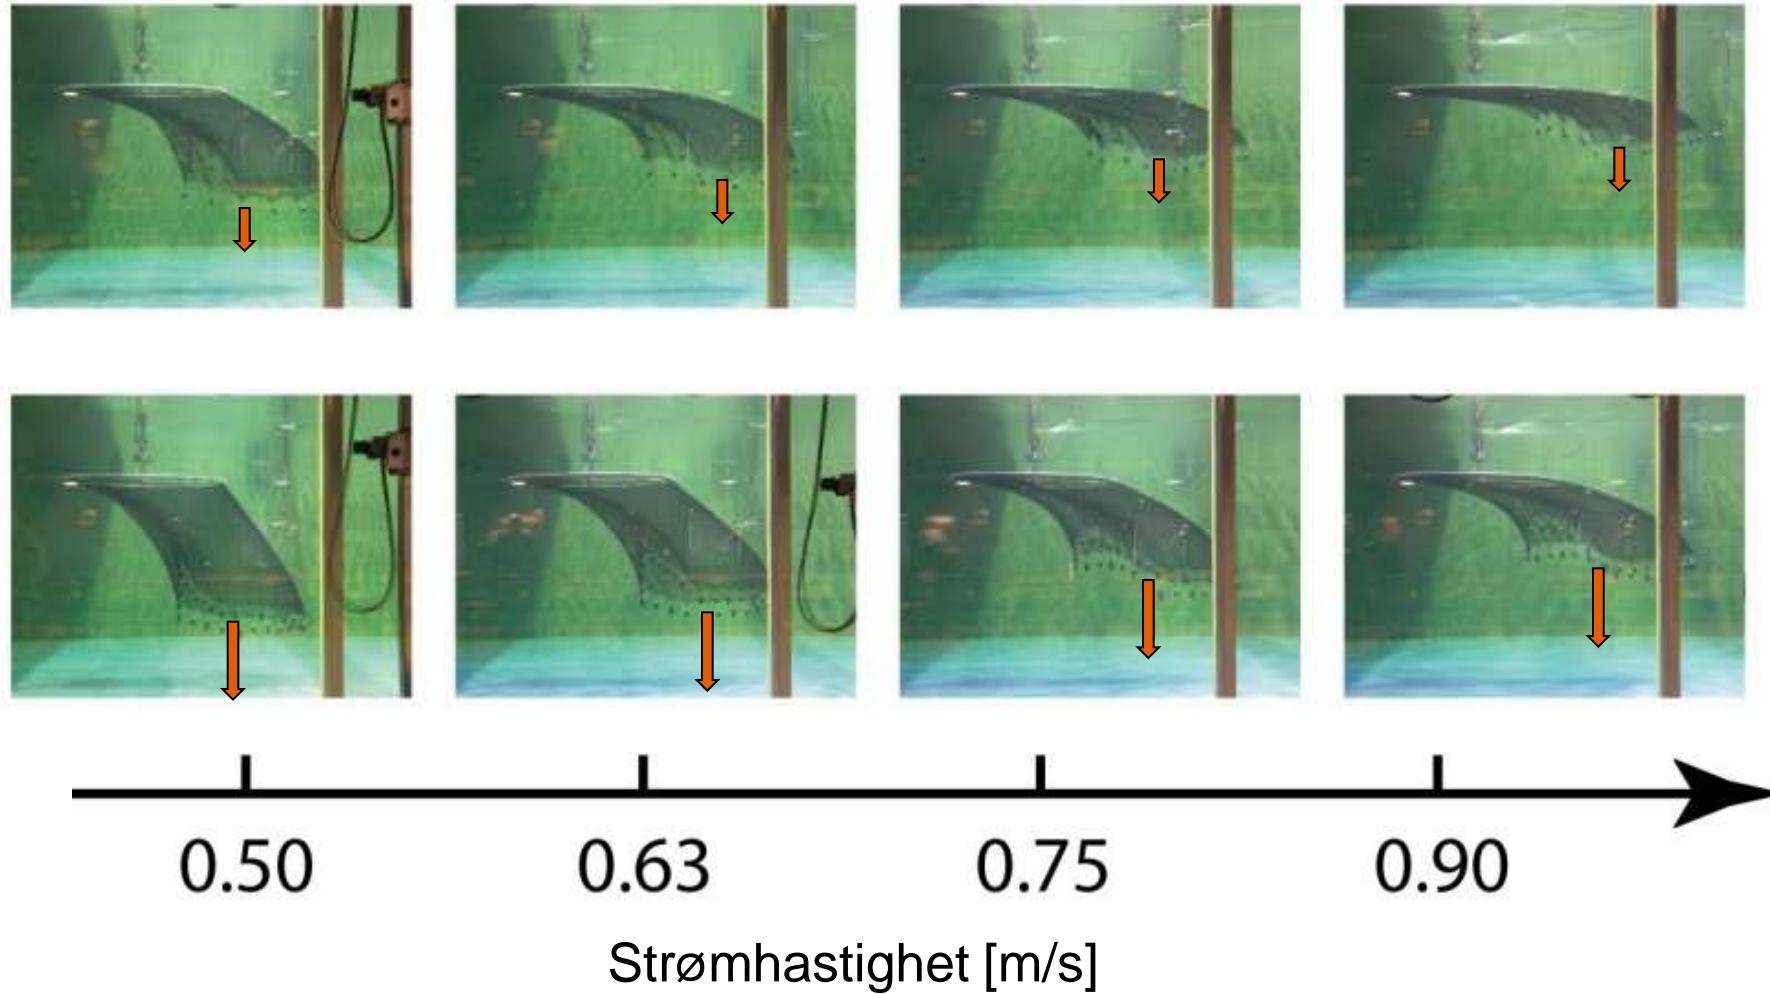

Soliditetens innvirkning

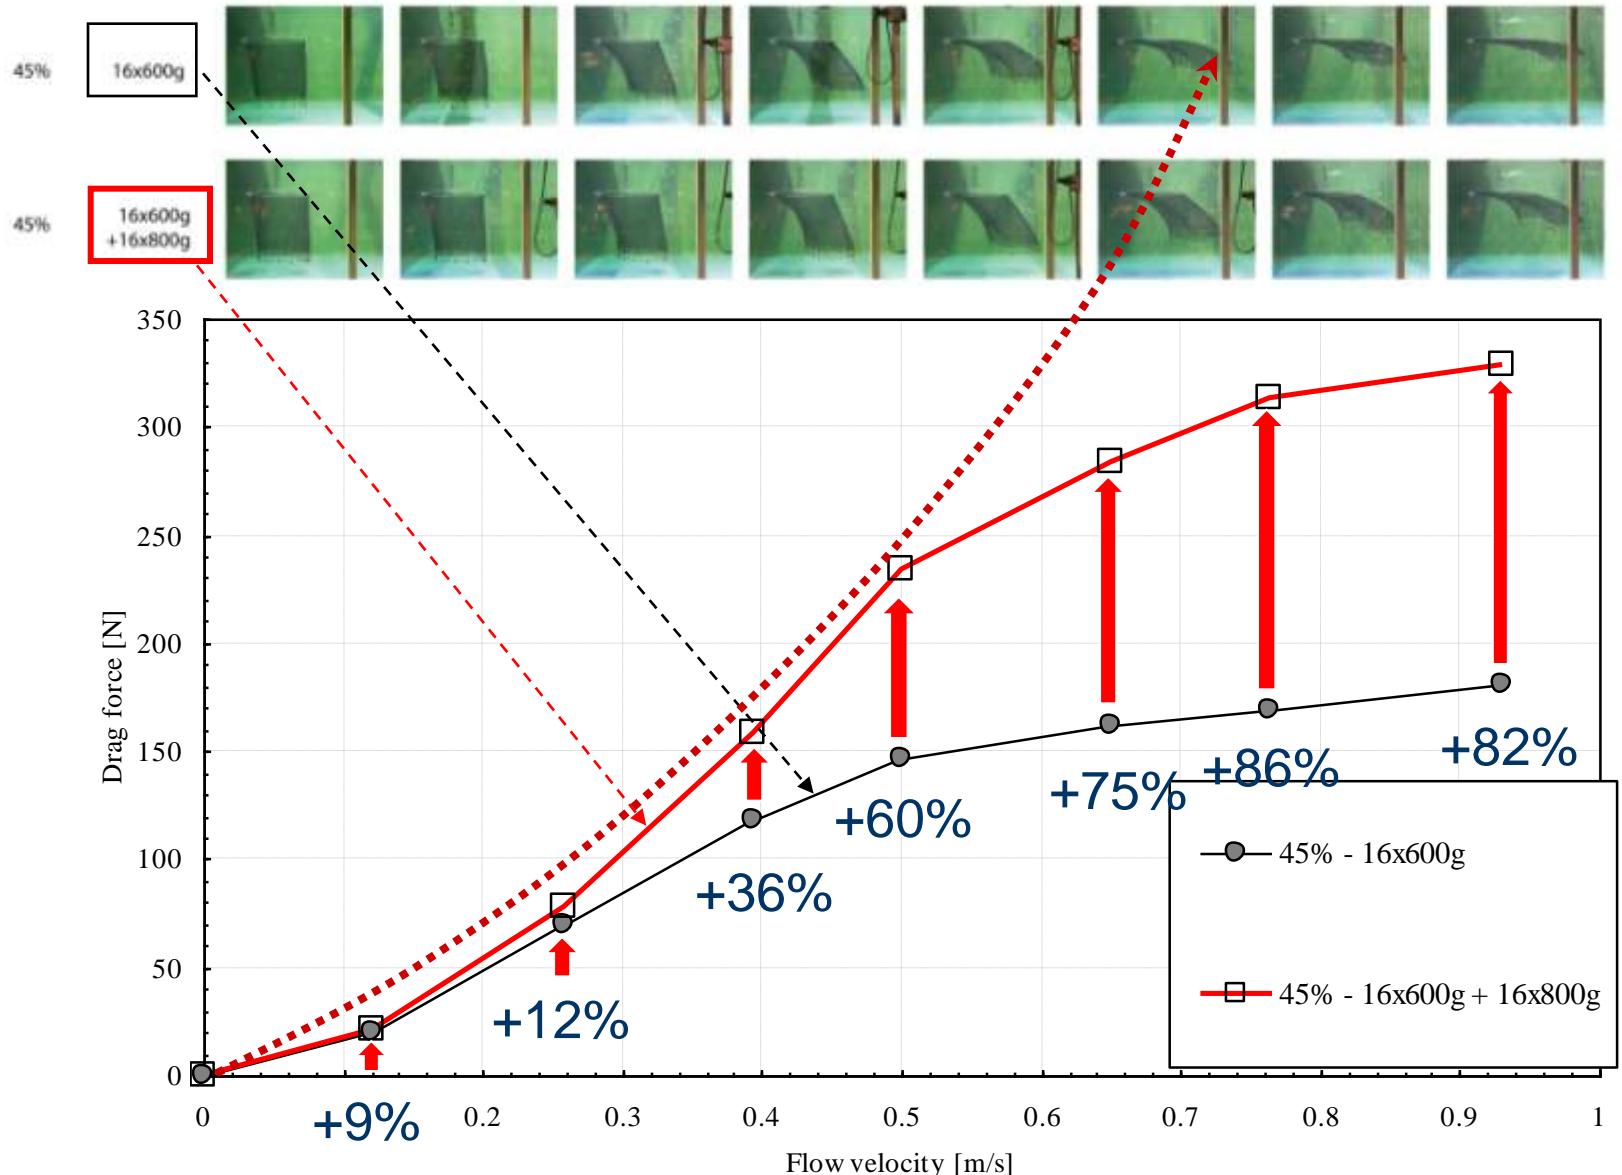

Effekten av dobbelt nett

Hva skjer når vi øker bunnvekten?

Effekt av økt bunnvekt

Oppsummering

- Alt henger sammen med alt
