

ELEGANCY Conference 2018

Opening & welcome

Dr. Nils A. Røkke, Chair Elegancy Board

Brussels, 2018-11-08

HSE

- Information provided by hotel staff

Global emissions are set to increase in 2018 - again

Global energy-related CO₂ emissions

Despite need for early emission reduction, the world is not moving towards the Paris goals but rather away from them

ipcc
INTERNATIONAL PANEL ON CLIMATE CHANGE

Global Warming of 1.5°C

An IPCC special report on the impacts of global warming of 1.5°C above pre-industrial levels and related global greenhouse gas emission pathways, in the context of strengthening the global response to the threat of climate change, sustainable development, and efforts to eradicate poverty.

a) Observed global temperature change and modeled responses to stylized anthropogenic emission and forcing pathways

Global warming relative to 1850-1900 (°C)

SR15- Special report on 1.5 deg warming - IPCC

b) Stylized net global CO₂ emission pathways
Billion tonnes CO₂ per year (GtCO₂/yr)

IPCC – Illustrative pathways

Global total net CO₂ emissions

Billion tonnes of CO₂/yr

Breakdown of contributions to global net CO₂ emissions in four illustrative model pathways

● Fossil fuel and industry ● AFOLU ● BECCS

P1: A scenario in which social, business, and technological innovations result in lower energy demand up to 2050 while living standards rise, especially in the global South. A down-sized energy system enables rapid decarbonisation of energy supply. Afforestation is the only CDR option considered; neither fossil fuels with CCS nor BECCS are used.

P2: A scenario with a broad focus on sustainability including energy intensity, human development, economic convergence and international cooperation, as well as shifts towards sustainable and healthy consumption patterns, low-carbon technology innovation, and well-managed land systems with limited societal acceptability for BECCS.

P3: A middle-of-the-road scenario in which societal as well as technological development follows historical patterns. Emissions reductions are mainly achieved by changing the way in which energy and products are produced, and to a lesser degree by reductions in demand.

P4: A resource and energy-intensive scenario in which economic growth and globalization lead to widespread adoption of greenhouse-gas intensive lifestyles, including high demand for transportation fuels and livestock products. Emissions reductions are mainly achieved through technological means, making strong use of CDR through the deployment of BECCS.

Global indicators	P1	P2	P3	P4	Interquartile range
<i>Pathway classification</i>	No or low overshoot	No or low overshoot	No or low overshoot	High overshoot	No or low overshoot
<i>CO₂ emission change in 2030 (% rel to 2010)</i>	-58	-47	-41	4	(-59,-40)
↳ <i>in 2050 (% rel to 2010)</i>	-93	-95	-91	-97	(-104,-91)
<i>Kyoto-GHG emissions* in 2030 (% rel to 2010)</i>	-50	-49	-35	-2	(-55,-38)
↳ <i>in 2050 (% rel to 2010)</i>	-82	-89	-78	-80	(-93,-81)
<i>Final energy demand** in 2030 (% rel to 2010)</i>	-15	-5	17	39	(-12, 7)
↳ <i>in 2050 (% rel to 2010)</i>	-32	2	21	44	(-11, 22)
<i>Renewable share in electricity in 2030 (%)</i>	60	58	48	25	(47, 65)
↳ <i>in 2050 (%)</i>	77	81	63	70	(69, 87)
<i>Primary energy from coal in 2030 (% rel to 2010)</i>	-78	-61	-75	-59	(-78, -59)
↳ <i>in 2050 (% rel to 2010)</i>	-97	-77	-73	-97	(-95, -74)
<i>from oil in 2030 (% rel to 2010)</i>	-37	-13	-3	86	(-34, 3)
↳ <i>in 2050 (% rel to 2010)</i>	-87	-50	-81	-32	(-78, -31)
<i>from gas in 2030 (% rel to 2010)</i>	-25	-20	33	37	(-26, 21)
↳ <i>in 2050 (% rel to 2010)</i>	-74	-53	21	-48	(-56, 6)
<i>from nuclear in 2030 (% rel to 2010)</i>	59	83	98	106	(44, 102)
↳ <i>in 2050 (% rel to 2010)</i>	150	98	501	468	(91, 190)
<i>from biomass in 2030 (% rel to 2010)</i>	-11	0	36	-1	(29, 80)
↳ <i>in 2050 (% rel to 2010)</i>	-16	49	121	418	(123, 261)
<i>from non-biomass renewables in 2030 (% rel to 2010)</i>	430	470	315	110	(243, 438)
↳ <i>in 2050 (% rel to 2010)</i>	832	1327	878	1137	(575, 1300)
<i>Cumulative CCS until 2100 (GtCO₂)</i>	0	348	687	1218	(550, 1017)
↳ <i>of which BECCS (GtCO₂)</i>	0	151	414	1191	(364, 662)
<i>Land area of bioenergy crops in 2050 (million hectare)</i>	22	93	283	724	(151, 320)
<i>Agricultural CH₄ emissions in 2030 (% rel to 2010)</i>	-24	-48	1	14	(-30, -11)

Global indicators	P1	P2	P3	P4	Interquartile range
Pathway classification	No or low overshoot	No or low overshoot	No or low overshoot	High overshoot	No or low overshoot
CO ₂ emission change in 2030 (% rel to 2010)	-58	-47	-41	4	(-59,-40)
↳ in 2050 (% rel to 2010)	-93	-95	-91	-97	(-104,-91)
Kyoto-GHG emissions* in 2030 (% rel to 2010)	-50	-49	-35	-2	(-55,-38)
↳ in 2050 (% rel to 2010)	-82	-89	-78	-80	(-93,-81)
Final energy demand** in 2030 (% rel to 2010)	-15	-5	17	39	(-12, 7)
↳ in 2050 (% rel to 2010)	-32	2	21	44	(-11, 22)
Renewable share in electricity in 2030 (%)	60	58	48	25	(47, 65)
↳ in 2050 (%)	77	81	63	70	(69, 87)
Primary energy from coal in 2030 (% rel to 2010)	-78	-61	-75	-59	(-78, -59)
↳ in 2050 (% rel to 2010)	-97	-77	-73	-97	(-95, -74)
from oil in 2030 (% rel to 2010)	-37	-13	-3	86	(-34,3)
↳ in 2050 (% rel to 2010)	-87	-50	-81	-32	(-78,-31)
from gas in 2030 (% rel to 2010)	-25	-20	33	37	(-26,21)
↳ in 2050 (% rel to 2010)	-74	-53	21	-48	(-56,6)
from nuclear in 2030 (% rel to 2010)	59	83	98	106	(44,102)
↳ in 2050 (% rel to 2010)	150	98	501	468	(91,190)
from biomass in 2030 (% rel to 2010)	-11	0	36	-1	(29,80)
↳ in 2050 (% rel to 2010)	-16	49	121	418	(123,261)
from non-biomass renewables in 2030 (% rel to 2010)	430	470	315	110	(243,438)
↳ in 2050 (% rel to 2010)	832	1327	878	1137	(575,1300)
Cumulative CCS until 2100 (GtCO ₂)	0	348	687	1218	(550, 1017)
↳ of which BECCS (GtCO ₂)	0	151	414	1191	(364, 662)
Land area of bioenergy crops in 2050 (million hectare)	22	93	283	724	(151, 320)
Agricultural CH ₄ emissions in 2030 (% rel to 2010)	-24	-48	1	14	(-30,-11)

Hydrogen?

- Not adequately represented in the SR15- no economics studied
- @scale it will be a true enabler for the better than 2deg world
- Sustainably produced hydrogen and derivatives like NH_3 are enablers for the zero emission society:
 - Industry
 - Heating and cooling
 - Zero emission mobility – especially for hard to decarbonise sectors
 - Transport
 - Energy storage
- Hydrogen, a simple solution to a complex problem- the simplest substance we know
