Mismatch in problem solving

As automation becomes 'smarter'...

HUMAN  
UNDERSTANDING  
OF AUTOMATION

...it becomes more difficult to understand.

How can we improve the understanding of automation behavior?

## Automation transparency

the automation's ability  
to afford  
understanding & predictions  
about its behavior

...towards an

individually-centered approach?

- ONE SIZE DOES NOT FIT ALL -

From a

technology-driven approach...

Is  
**individually-centered**  
 decision support

relevant in  
**complex**  
 and  
**safety-critical work?**

# STRATEGIC CONFORMANCE

"the degree to which the automation's solution and **apparent underlying operations match** those of the **human's**"

## APPROACH

1

Prequel simulation

2

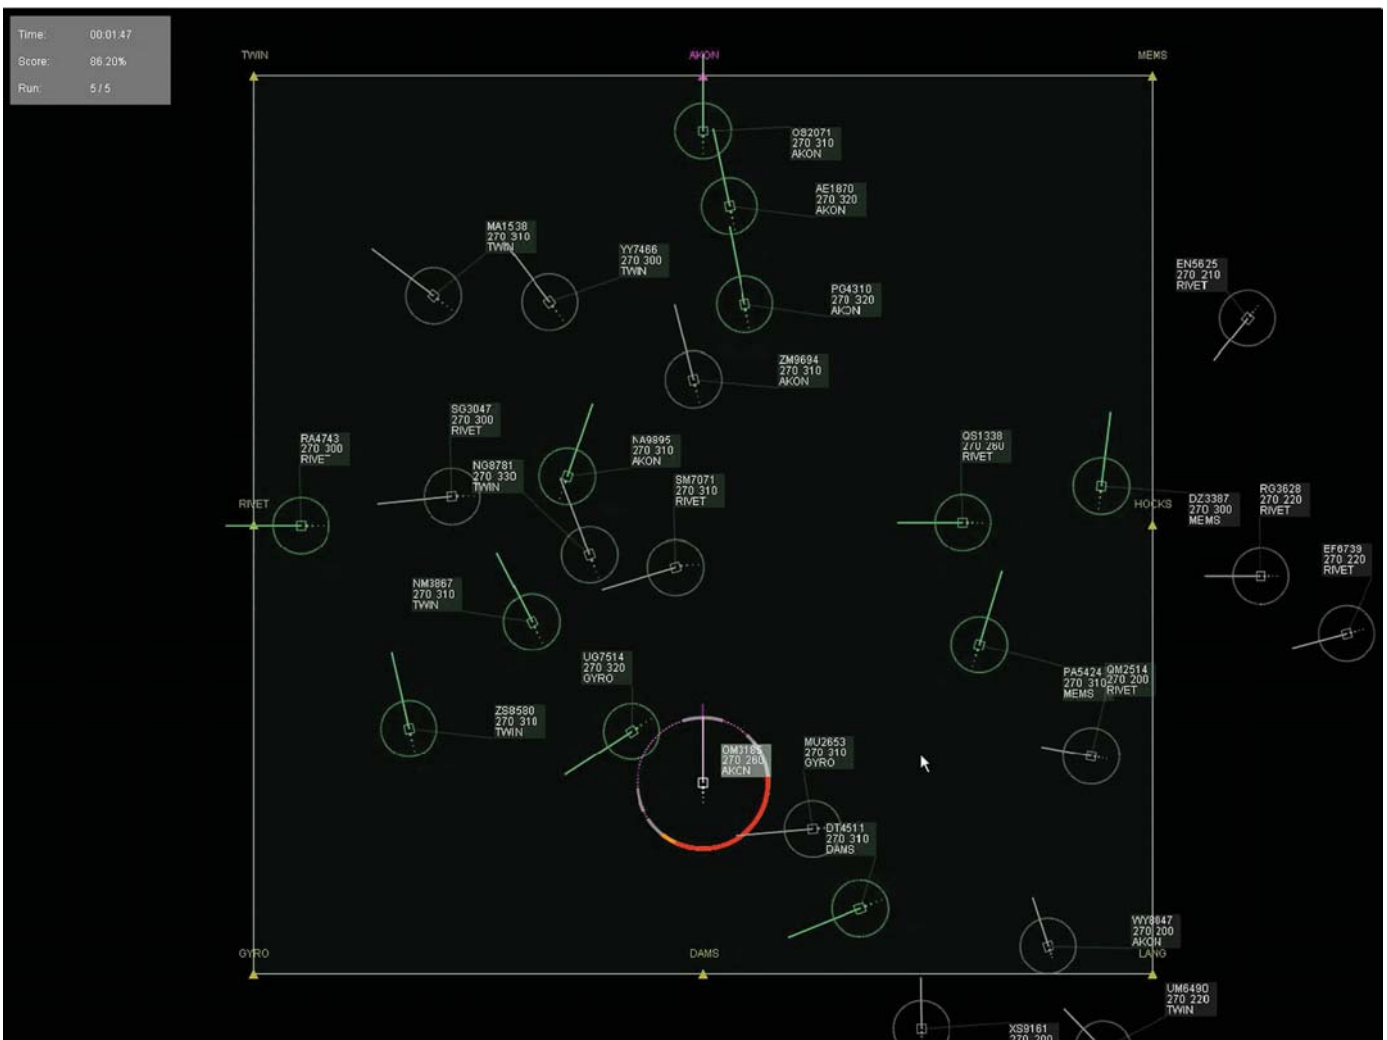

Conformance design  
Analyze solutions

3

Experiment

20% conformant (1/5) of controller's own solution  
50% nonconformant (1/2) of controller's solution (no refinement)

3

# Experiment

Advisory agreement

Disagree    Neutral    Agree

Accept

Reject

5

50% *conformal*  
(replay of controller's own solution)

50% *nonconformal*  
(replay of colleague's solution that is different)

# CONSISTENCY PATTERNS

# EFFECTS OF STRATEGIC CONFORMANCE

Conformal advisories had significantly higher acceptance, higher agreement, and faster response time than non-conformal advisories

# DO WE WANT PERSONALIZATION?

SELF-EXPLAINING  
AUTOMATION

# FUTURE RESEARCH

Multiple Remote Towers

Maritime piloting

RESKILL

Transparency of ATC Automation:  
How Can Personalized Decision Support  
Improve Human-Automation Interaction?
